

# ADSA Hadoop Introduction Workshop

10/2/2015

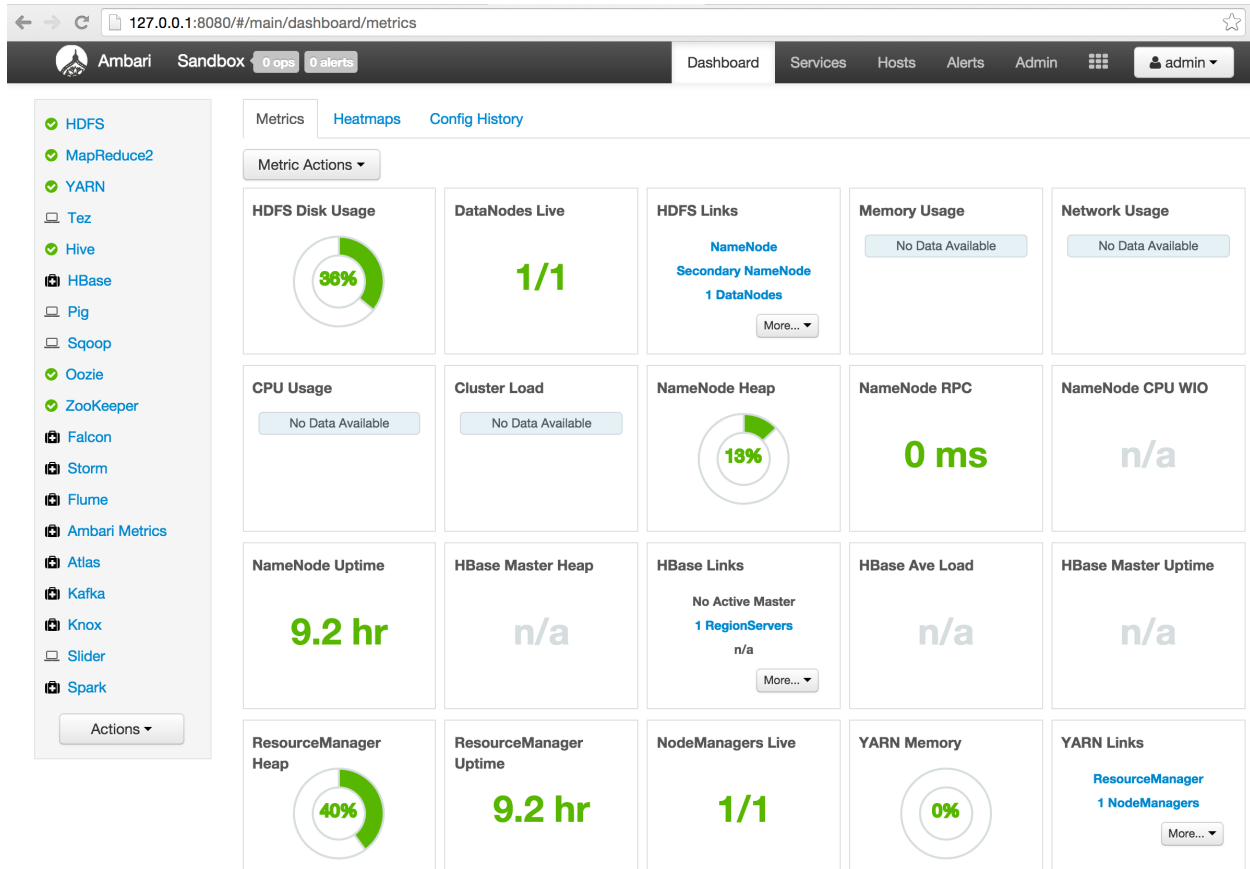

## Sample Program 1: Pig Word Count

1. With the HortonWorks 2.3 environment running, open a browser to Ambari at: <http://127.0.0.1:8080/#/login>
2. Login to Ambari with username **admin** and password **admin**
3. Ambari will show if all the services are running or not. If a service is not running and shows a red alert next to its name, click on each service name that has a red alert and correct the issue. Usually, the service needs to be started. Use the Service Action drop down menu (located in the upper right corner of the page) to start the service.
4. If you start a service, please wait until the service completely starts. A progress bar will be displayed.

0 Background Operations Running			
Operations	Start Time	Duration	Show: All (10)
✓ Start HDFS	Today 09:41	189.81 secs	100% ▶
✓ Start YARN	Today 09:40	31.08 secs	100% ▶
✓ Start HBase	Mon Sep 14 2015 13:39	30.35 secs	100% ▶
✓ Start YARN	Mon Sep 14 2015 13:38	30.59 secs	100% ▶
✓ Start HDFS	Mon Sep 14 2015 13:35	118.65 secs	100% ▶
✓ Start HBase	Mon Aug 31 2015 09:13	33.81 secs	100% ▶
✓ Start YARN	Mon Aug 31 2015 09:12	19.72 secs	100% ▶
✓ Rolling Restart of NodeManagers	Mon Aug 31 2015 09:10	13.61 secs	100% ▶
<input type="checkbox"/> Do not show this dialog again when starting a background operation			OK

The red alerts should disappear on their own after a short time. You should wait until all the alerts are gone. (Typically, you need to wait less than a minute for the alerts to disappear.) The services HDFS, MapReduce2, YARN, Hive, Oozie, and Zookeeper need to have green checkmarks shown next to their name (on the left hand side of the page). This will indicate all the services running properly

Here is a screen snapshot of Ambari with no alerts.

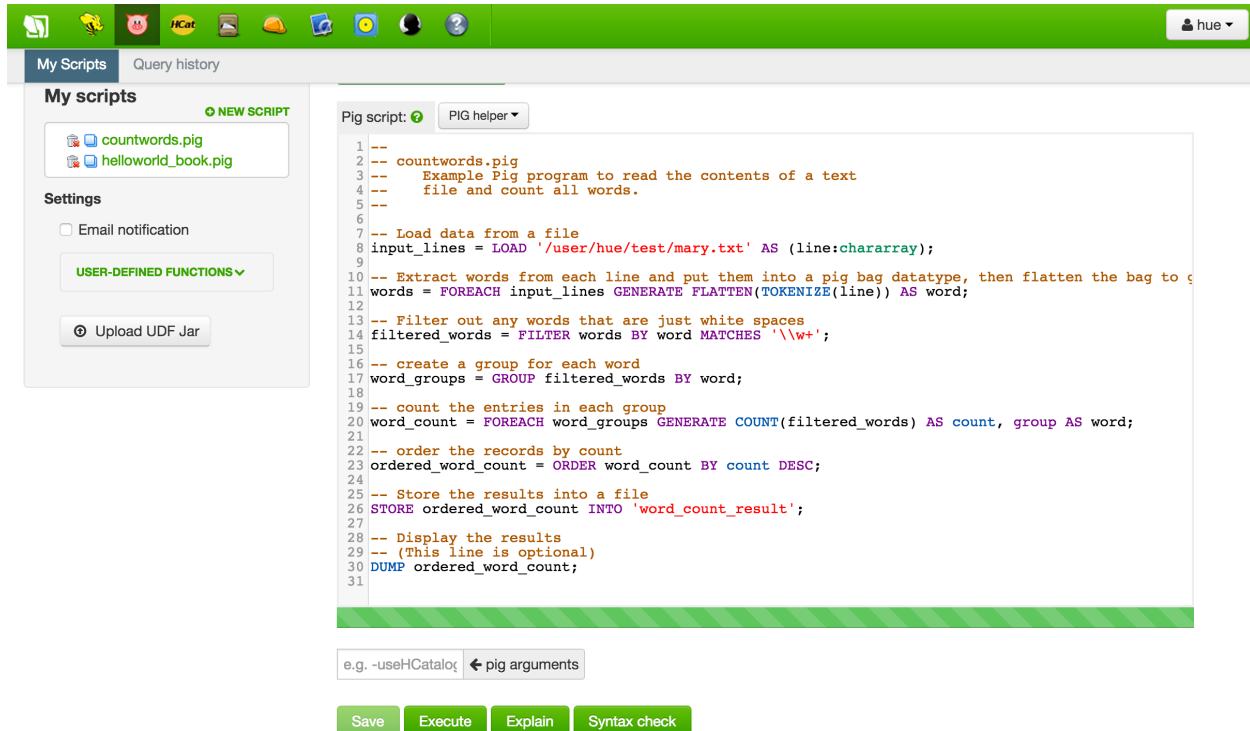

5. With all the services properly running, go to the web interface at <http://127.0.0.1:8000/about/>

## Hue

Component	Version
Hue	2.6.1-2557
HDP	2.3.0
Hadoop	2.7.1
Pig	0.15.0
Hive-Hcatalog	1.2.1
Oozie	4.2.0
Ambari	2.1-1470 <button>Disable</button>
HBase	1.1.1
Knox	0.6.0
Storm	0.10.0
Falcon	0.6.1
Sandbox Build	f1dc3df 09:23 03-04-15

6. Add a some files to the environment.
  - In the menu bar, click on the File Browser (File cabinet icon).
  - Create a new folder (named test)
  - Use the Upload button to import the data files
    - book.txt
    - mary.txt
7. Run the pig count words example.
  - In the menu bar, click on the Pig (Pig face icon)
  - Cut and paste the text from the **countwords.pig.txt** file into the script window.
  - Edit the path to the file on line 8 so it matches your location
    - '/user/hue/test/mary.txt'
  - Give the script a title (countwords.pig) and click on Save to save the file
  - Run the script by clicking on the Execute button

- You will see a progress bar at the bottom of the screen and a message that the job has started.
- The job may take several minutes to complete. When the job completes, the Kill Job button will be replaced with the Execute Explain Syntax check buttons.
- After the job has completed, Scroll down to view the output.

Here are some of the results:

Save

Execute

Explain

Syntax check

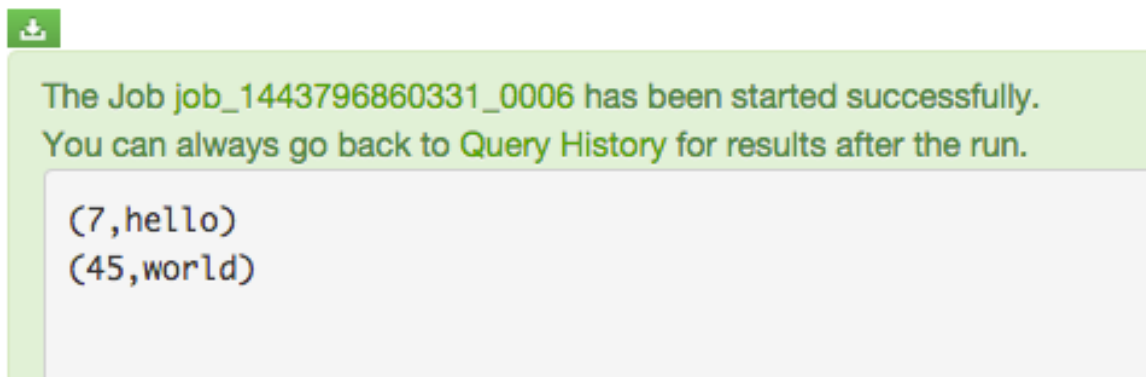

The Job `job_1443796860331_0012` has been started successfully.  
You can always go back to [Query History](#) for results after the run.

(1,loves)
(1,laugh)
(1,eager)
(1,about)
(1,went)
(1,till)
(1,that)
```

## Sample Program 2: Pig Hello World

1. Start with the HortonWorks web interface with all the services properly running:  
<http://127.0.0.1:8000/about/>
2. Run the pig hello world example.
  - In the menu bar, click on the Pig (Pig face icon)
  - Cut and paste the text from the **helloworld.pig.txt** file into the script window.
  - Edit the path to the file on line 8 so it matches your location
    - '/user/hue/test/book.txt'
  - Give the script a title (**helloworld.pig**) and click on Save to save the file.
  - Run the script by clicking on the Execute button.
3. After the script completes, scroll to the last page of the output:

## Sample Program 3: Hive Word Count

1. Go to the HortonWorks web interface, <http://127.0.0.1:8000/about/>
2. In the menu, click on the File Browser icon.
3. Upload the **book.txt** file in the /user/hue/test/ directory.
4. In the menu, click on the Hive icon (yellow bee-elephant).
5. Cut and paste the Hive program (**helloworld.hive.txt**) into the Query Editor.
6. Click on Execute to run the script. Wait for the script to complete.
7. Scroll through the results when they are displayed.
